

Microsoft SharePoint by fme

Your strategy for a company-wide information platform

The availability of information and how it is handled are key factors when it comes to the efficiency of your employees. Does the Microsoft SharePoint platform play a key role in your information strategy today, or will it in the future? Take advantage of our many years of experience as a Microsoft Gold Partner for SharePoint and discuss your strategy with us!

We'll show you

- The role SharePoint can play as part of your company-wide information strategy
- What integrations to other systems are logical and feasible in terms of an efficient exchange of information
- The range of approaches the standard version of SharePoint offers as a company-wide information platform and how third-party products and solutions can be integrated to expand these approaches

We value a complete assessment including often neglected issues such as data and document migration and ergonomic software design.

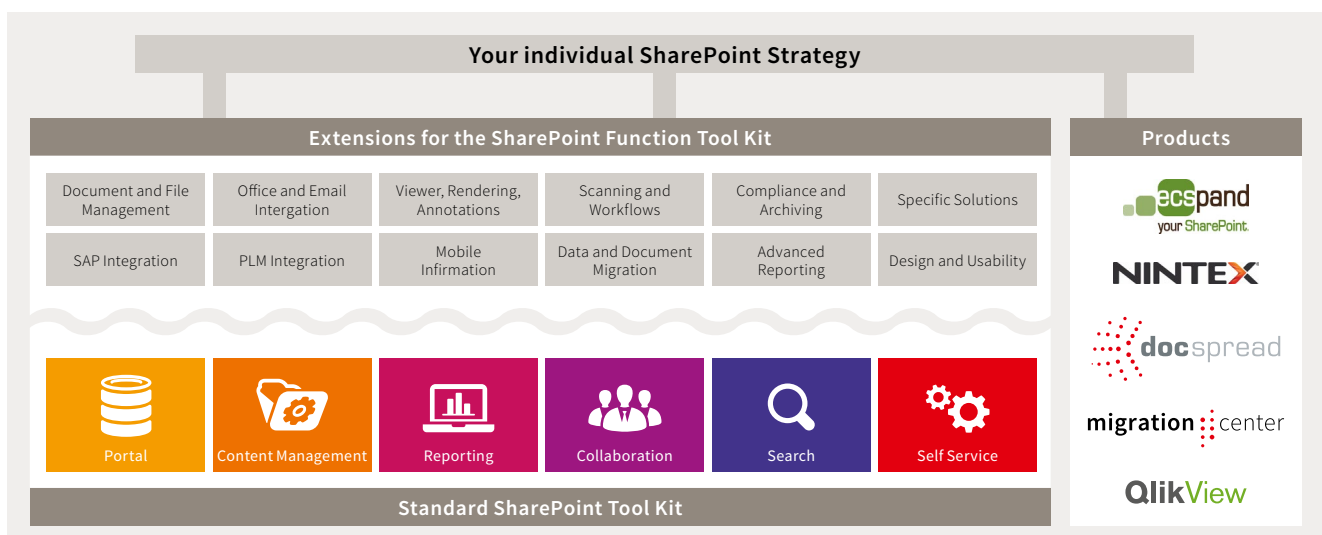

fme is familiar with the in's and out's of all SharePoint features, particularly in the areas of collaboration, portals, enterprise content management, and integrating various different systems. fme products and solutions as well as those from third parties make it possible to expand the standard SharePoint platform into an enterprise information platform with fully fledged ECM functions and integrations in all key company divisions.

SharePoint 2013 opens up new opportunities to

Microsoft Partner
Gold Collaboration and Content

work together. SharePoint offers a comprehensive solution for handling information so that change the way they work and simultaneously take advantage of the benefits of structured processes, compatibility, and existing IT investments. The new version of SharePoint features innovative methods to share your work and collaborate with others, organize projects and teams, and search for information. SharePoint 2013 was adapted to the way users work and delivers a reliable, consistent overview of data, collaboration, and processes as well as IT with a comprehensive, integrated, easy-to-manage platform to meet company requirements.

Let's work together to define your SharePoint strategy and plan and fill your individual tool kit to ensure you are well equipped for professional deployment of SharePoint in your business.

Expansion options of the standard version of SharePoint as part of your individual SharePoint strategy using off-the-shelf products and solutions

SharePoint Consulting

Are you thinking about implementing SharePoint in your company or would you like to expand the existing projects to other departments?

A clear strategy and a roadmap derived from that strategy are essential in order to successfully implement and use SharePoint as a portal, collaboration platform, or as a company-wide enterprise content management system.

We work together with you to develop strategies that we use to pave the way for successful implementation or expansion and establish which further steps are necessary.

- SharePoint strategy
- Enterprise content management strategy
- Collaboration strategy
- Social business collaboration strategy

Sharepoint Design, Usability, Software Ergonomics

You can achieve a high level of acceptance among users with top-quality design, usability, and software ergonomics. These are key components for us when we work together with our customers when executing projects and developing software. As such, we work closely with a specialized agency.

Sharepoint Integration

When your company starts using different systems in parallel, you will want to link the systems with one another sooner or later. Be it an SAP, BI, ECM or PLM system, we offer integration solutions to conveniently link data with Microsoft SharePoint. Examples include:

- SharePoint-SAP integration
- SharePoint-Documentum integration
- SharePoint-PLM integration
- SharePoint-QlikView integration

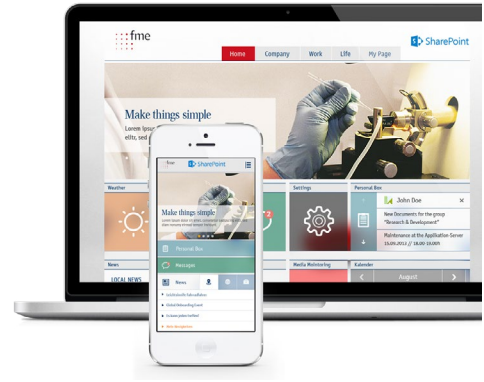

Sharepoint Migration

Are you planning a new application? We bring your content to your SharePoint environment in a quick and secure manner using a tried-and-tested product and many years of migration experience.

- fme migration-center
- Various migration paths from different source systems to SharePoint 2010/2013

Sharepoint Upgrade

Take advantage of our in-depth technological expertise and upgrade your SharePoint environment to the latest version.

- Upgrading to SharePoint 2013
- Upgrading other portal technologies to SharePoint
- Adding further standards or individual functions

Sharepoint Solutions

We have already implemented a range of solutions for various customers – some including partner products. Benefit from that added value!

- Enterprise Search
- Intranet and portals
- Mobile access and responsive design
- Process visualization
- Quality management
- Contract management

References

The following are some examples of successful fme projects with SharePoint.

- Consultation and implementation during the integration of existing EMC Documentum systems into SharePoint, for example, via integration products from EMC, Wingspan, or an individual solution.
- System implementation for manufacturers' and test specifications in the pharmaceutical production based on SharePoint; mapping the entire process of creation, testing, release, and official approval of these specifications in a continuous, paper-less workflow
- Creation of project sites based on SharePoint with the integration of EMC Documentum as a powerful platform in the backend
- Consulting an internationally active energy company on mapping offline functions in SharePoint
- fme sales process dashboard: expandable process visualization solution based on Microsoft SharePoint that customer can maintain and manage

We would be happy to provide detailed information on our SharePoint services and solutions upon request. Talk to us! We look forward to accepting your challenge.
