

# Optimal Deployment And Efficient Operation Of Your OpenText Documentum Environment Through Containerization

Efficient, agile, scalable and automatized

Are you facing the challenge of regularly providing new Documentum environments? Do the costs for operating and documenting your systems constantly increase? Is the deployment of new software components very time-consuming?

Containers are the next big step in IT infrastructure like mainframes in the 1990s, computers in the 2000s or virtual machines in the 2010s. Software and services, hosted in containers, are flexible, efficient, quickly available, stable and scalable and have many advantages in maintenance. Containerization – e.g. with Docker – is widely known as a technology used especially by cloud service providers. However, the use of containers does not automatically mean that applications are moved to the cloud. It is also possible to set up a containerized on-premises environment – depending on the needs of your business. Take advantage of this decade's technology to further optimize the operation of your OpenText Documentum environment.

## Our Offer

We offer a multi-level approach to optimizing your OpenText Documentum environment by using containers and orchestration. We support you with our individualized consulting services, workshops and service packages. Starting with essential questions such as »What are containers and how do they work?« to more complex topics such as »How to benefit from containers (in also regulated environments)?«, to more advanced tasks such as building a complete OpenText Documentum infrastructure, both on-premises and off-premises – we accompany you on your way into the future.

fme software architects with in-depth professional knowledge of OpenText Documentum, containerization and validation will guide you step-by-step from the basic workshop to the operation of OpenText Documentum.

## Your Advantages

- Up to 90 % faster deployment of a new OpenText Documentum environment
- Up to 95 % reduction in documentation effort of installations (IQ)
- Software identical environments (e.g. test and productive system) and thus more representative tests
- Fulfilling standards which are enforced by the containers and orchestration tools

### for EDMS / ECMS Sr. Architects

- Gain an understanding of containerization and its benefits for IT organizations
- You are able to use the containerization technology for existing and future OpenText Documentum environments
- You understand what containerization means in validated environments

### for Head of Regulatory Affairs

- Learn how to achieve benefits while fulfilling compliance requirements
- You understand the technical background of cloud solutions
- You know the functional principles and the benefits

### Target group

- Field IT
- Documentum Senior Architects
- Enterprise/Cloud Architects
- Computer Validation Specialists
- Head of Regulatory Affairs

## Our Service Offering in Detail

### Containerization basic workshop

- Principles of containerization
- Differences between re-platforming, lift'n'shift, lift'n'extend and redesign
- Platforms for hosting containers

### Containerization scoping workshop

- How to build containers
- Scenarios for OpenText Documentum containers
- Benefits of potential OpenText Documentum use cases

### PoC for OpenText Documentum containerization

- Setup of a container infrastructure running on-premises
- Scenarios for OpenText Documentum containers
- Platforms for hosting containers

### Fully containerized on-premises OpenText Documentum environment

- Setup of an on-premises enterprise container orchestration
- Deployment of a new, fully containerized OpenText-Documentum environment
- Migration of OpenText Documentum content into the new environment

### Fully containerized off-premises OpenText Documentum environment

- Setup up of an off-premises enterprise container orchestration
- Deployment of a new, fully containerized OpenText Documentum environment
- Migration of OpenText Documentum content into the new environment

### fme Application Management Services

- Operation of OpenText Documentum-based solutions on-premises and off-premises
- Up to 24\*7 operation and support depending on customer requirements
- 2<sup>nd</sup> and 3<sup>rd</sup> Level Support

## Your Way to Containerization

Start with step one, the basic workshop on containerization, which teaches you the basic principles of containers. Do you already have the basic knowledge? Then we can directly start with the scoping workshop. We gladly tailor and setup workshops based on your individual needs for maximum impact.

This offer addresses OpenText Documentum environments. However, containerization and orchestration technologies target a wide variety of software combinations and can therefore also be used in many other application scenarios. Why don't you integrate fme's in-depth containerization expertise into other scenarios in order to exploit further optimization potential?

**We are looking forward to your individual challenges!**
